

**JOB OPPORTUNITY**

**POSITION:** Quality and Verification Analyst  
**REPORTS TO:** Quality and Verification Manager  
**LOCATION:** Ottawa, On

---

Established in 1982, and now a business unit within Stanley Black & Decker, Inc., InstanTEL is the global market leader in the design and production of vibration monitoring instrumentation. Our products are used in over 120 countries. Applications include civil engineering, construction, environmental, mining, mining exploration, quarry, underwater, structural health, human annoyance, military and noise.

**Summary:**

- Ensuring that all new products, software releases, and documentation are dealer, customer and market ready upon release.
- Managing and maintaining our agile system use in project development and the tracking new features, enhancements and issues.
- Adept at developing, documenting and implementing comprehensive product verification test plan, QA procedures and acceptance criteria that are easy to follow.
- Possess exceptional understanding of the product development lifecycle.
- Conduct and manage the field trial phase of the product development lifecycle.
- Coordinating the new product introduction activities with production to ensure the efficient and timely release of products.
- Capable of direct customer contact to ensure current and new features are understood, documented correctly and meet their needs.
- Develop enhancements in the QA daily workflow including automated test systems that can perform repetitive testing and generate quality reports.
- Root cause analysis and disposition of reported issues.
- Assist with planning, organizing, scheduling, managing and executing project development plans while meeting or exceeding milestone targets.
- Ability to review current and new documentation to ensure a consistent and clear message is provided.
- Adept at understanding user work flows while ensuring the usability of the product interface.
- Capable of clear, concise oral and written communication, committing to a time line and delivering on time, extremely creative and self-driven.

Requirements:

- A university degree in Software Engineering or equivalent
- A minimum of 5 years of experience in QA testing
- An advanced and detailed understanding of communication systems including Serial, USB and TCP/IP.
- Exceptional analytical and problems solving skills to provide prompt resolution to unique and challenging situations.
- Outstanding judgment and leadership qualities.
- Be a self-starter capable of both independent and team work.
- Expertise in quality assurance testing and automation.
- Experience with JMeter, Selenium, Restful API and Python will be an asset.
- A solid understanding and appreciation of how technical development is related to deadline driven deliverables, the needs of the business, and the financial health and viability of the enterprise.
